

Hi. I am Jasmin,  
A german frontend developer.  
I'm currently participating in a frontend bootcamp.  
In my spare time im trying to improve my UI-UX design skills.

About	Work	Facts
<p>Hello there, I'm Jasmin 🙋, a german based frontend developer currently focused on building frontend systems and shaping relevant interfaces. I'm deeply passionate about creating bridge between business vision and users expectations.</p> <p>As a <b>(UX) designer</b>, I love working with agile methodologies in the whole lifecycle of a product in collaboration with the product manager and the developers. To create the best possible user experience.</p> <p>As a <b>front-end developer</b>, I understand the development team and — when I am not developing it myself — I always design with the front-end skills of the team in mind. I am able to implement features in vanilla HTML/CSS, JS .</p> <p>I want to do something that I enjoy and where I can develop further. And that is definitely UI - UX design.</p> <p>Besides my interest in design / IT I am a huge film lover, a book lover &amp; sometimes a geek.</p> <p>Like i mentioned above in my spare time I am currently learning to become better at creating beautiful designs with figma.</p> <p>You can visit my personal website at: <a href="https://jasmindedic.github.io/">https://jasmindedic.github.io/</a></p>	 <p><b>Instagram clone</b> Front-end Design/Development This project represents the famous social media app Instagram.
